the eco-friendly Terrazzo
made in Italy

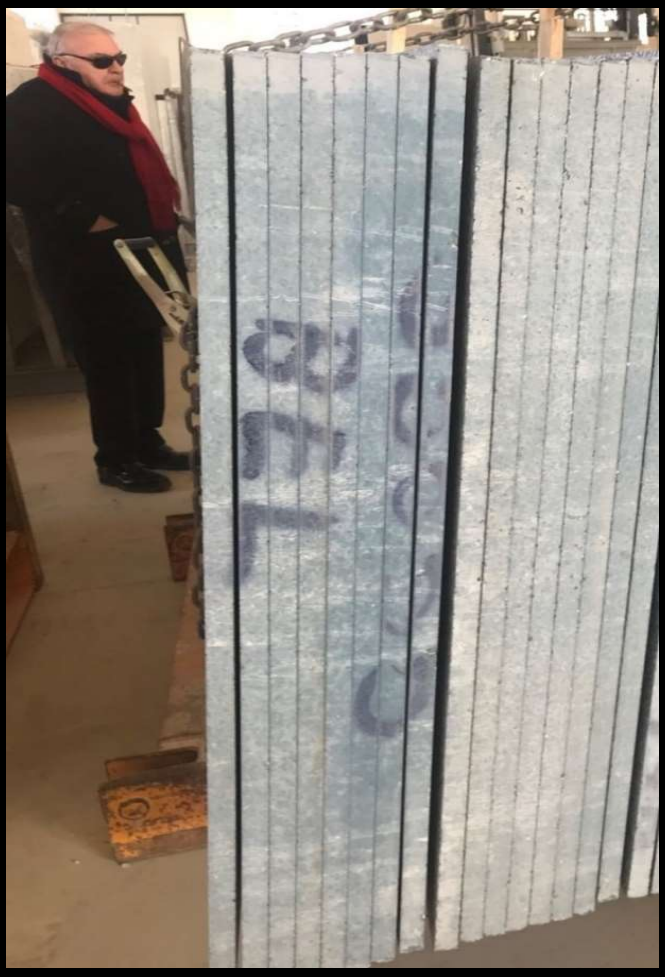
“Our materials are made of materials with a past”

First of all Belotti Tiles Terrazzo's sustainability is characterised by the durability of our agglo-cement , the efficient and careful handling of energy and resources needed.

Our company stands for producing only Eco-Friendly and recycled materials entirely resin-free.

Belotti Terrazzo blocks, slabs and tiles are the result of a perfect mixture of completely natural components such as marble chips, cement and water: a high end product “Made in Italy”.

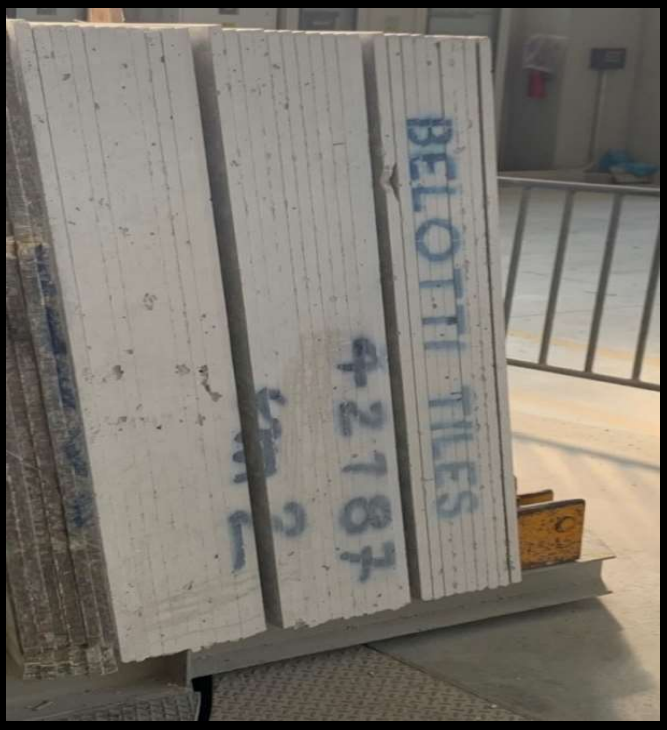
Belotti Tiles has been founded in Zandobbio, near Bergamo, Italy, in 1955: the first and oldest worldwide terrazzo production company.
Thanks to more than 65 years of constantly growing our name and our products are known across the globe.



High technology, frames for sawing into slabs, polishing lines, plants for the processing and finishing of customized products, an efficient warehouse for the storage of raw material and finished products: this is the strength of our company which is one of Europe's largest producer of Terrazzo – Agglo cement.

It is our mission to promote the use of marble-cement agglomerates that provides excellent levels of performance.

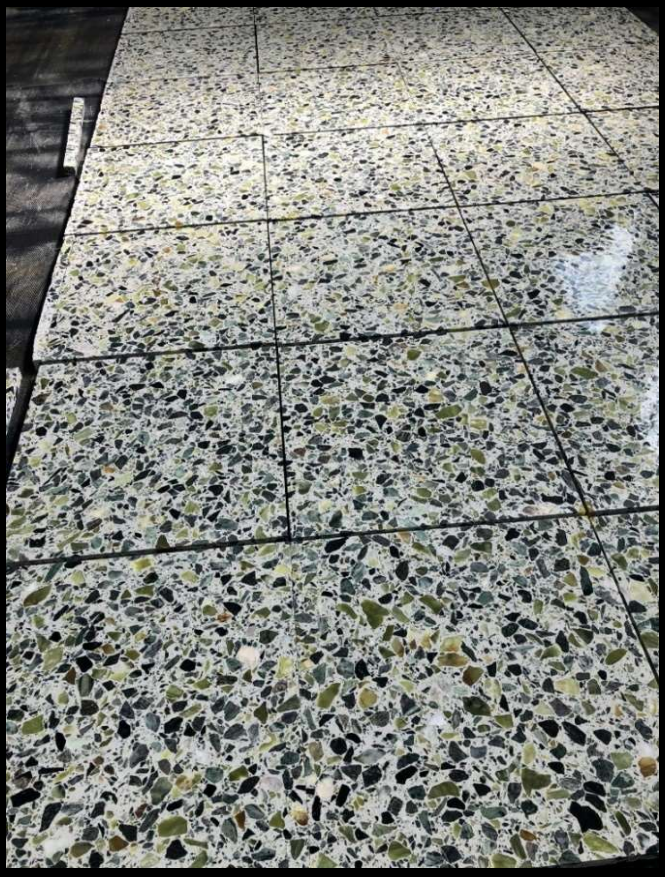
We invest constantly in innovation, in plants and equipment, because we believe that improving existing products and developing new ones is essential in order to maintain the highest quality standards in our marble cement products.



The design of our Agglostyle series sets trends, and our vast range of colors ensures that you get the material best suited to your specific needs. Being cut from slabs that have, in turn, been cut from solid blocks of terrazzo, all our marble cement agglomerates can be personalized and made specifically to meet your specific design needs.

Our team of technicians is at your full disposal and will work with you throughout your project, from selecting the right material to installation and on through maintenance of the finished product.

Our product is an inimitable, one-of-a kind union of tradition and innovation that continues to evolve in order to meet the needs of even the most demanding projects.



The creation of terrazzo blocks, subsequently cut into slabs, ensures the versatility, durability, and design of our products.

Constant investment in new technology throughout the production process enables us to work to certified high standards of quality.

Our terrazzo blocks are subjected to recurring quality controls to ensure our material is durable and safe.

Terrazzo also features good elasticity, stability and resistance, it is ideally suited to being used in normal and heavy traffic areas thanks to its technical characteristics: high resistance to wear, compression and abrasion.

Our products are resistant to light and UV rays and reaction to fire class A1. The research and development behind Belotti Tiles materials enables us to create terrazzo blocks from various types of marble chips and to create exclusive colors to meet your specific needs.
